

Supplementary: Extended Experimental Results

This supplementary material provides per-architecture breakdown (sec:per-arch), statistical significance tests (sec:significance), effect sizes (sec:effect-sizes), confidence intervals (sec:confidence-intervals), sensitivity analysis (sec:sensitivity), extended ablation study (sec:extended-ablation), and scalability analysis (sec:extended-scalability).

Per-Architecture Breakdown

Claude Code (Hierarchical Architecture)

Architecture Characteristics:

- ▶ Primary agent: Orchestrator with full context
- ▶ Sub-agents: Task-specific workers with limited scope
- ▶ Communication: Unidirectional delegation
- ▶ State: Centralized in orchestrator

Table 1: Claude Code detection results by attack type.

Attack Type	Baseline	Firewall	Sandbox	Tripwires	Full CIF
Distributed Denial of Service	0.00	0.00	0.75	0.01	0.05
