

Framework Configuration Reference

This section documents configuration parameters for all CIF defense components. For algorithm pseudocode, see [sec:methodology](#). Sensitivity analysis quantifying parameter impact is provided in [sec:sensitivity](#).

Reproducibility: Default values were determined via `scripts/run_sensitivity_analysis.py` $\rightarrow$ `output/data/sensitivity_results.json`. Empirically validated ranges are reported across all six architecture types.

Core Framework Parameters

Table: Core framework configuration parameters.

{#tab:core-params}

Parameter	Symbol	Default	Range	Description
Acceptance threshold	τ_{accept}	0.7	(0, 1)	Minimum belief confidence
Tolerance		0.0	(0, 1)	Direct
