

Supplementary: Extended Experimental Results

This supplementary material provides per-architecture breakdown (sec:per-arch), statistical significance tests (sec:statistical-validation), effect sizes (sec:effect-sizes), confidence intervals (sec:confidence-intervals), sensitivity analysis (sec:sensitivity), and extended ablation and scalability analysis (sec:extended-ablation).

Per-Architecture Breakdown

Claude Code (Hierarchical Architecture)

Architecture Characteristics:

- ▶ Primary agent: Orchestrator with full context
- ▶ Sub-agents: Task-specific workers with limited scope
- ▶ Communication: Unidirectional delegation
- ▶ State: Centralized in orchestrator

Table: Claude Code detection results by attack type.

{#tab:claude-code-detection}

Note: Baseline values represent undefended success rates measured without any CIF defense mechanisms active.
